6pm- 9pm, May 13, 2015 @ [Cool Springs](#) near New Bern, NC

Leaders: Jeff Hall, North Carolina Wildlife Resources Commission (NCWRC); Mike Campbell, NCWRC

Overview: Class will spend a few hours inside learning Anuran (frog and toad) ID, frog calls, ecology and CASP protocols. We will then conclude with time listening outside.

Target Audience: Conservation-minded citizens interested in learning more about frogs and toads. Also, folks that might be interested in running a Calling Amphibian Survey Program (CASP) route, and volunteers that are already involved in the program who'd like to brush up on their skills.

More Info: Dress for the weather. Bring a bag dinner and prepare to learn more about these voices of the night.

CASP is a statewide volunteer-based survey program that provides critical information for the conservation of NC's anurans. Come learn about our frogs and toads, and be a part of conservation in action!
